

REVO Position Sensor Wiring

Connections:

- Red 10 – 24vdc
- Black Negative
- White/Clear Signal 0.5 – 4.5v
- Braided Shielding

Note:

Shielding needs to be continued through any connectors that may be used and grounded at one end.

Setup:

If supplied please refer to the REVO datasheet for any pre-supplied information. If sensor data is not available simply operate the REVO from zero to full open to determine the voltage range for that REVO.
