

## REVO Position Sensor Wiring

### Connections:

- Red                    10 – 24vdc
- Black                  Negative
- White/Clear        Signal 0.5 – 4.5v
- Braided              Shielding

### Note:

Shielding needs to be continued through any connectors that may be used and grounded at one end.

### Setup:

If supplied please refer to the REVO datasheet for any pre-supplied information. If sensor data is not available simply operate the REVO from zero to full open to determine the voltage range for that REVO.
